

## Graduate Positions in Wetlands Ecology at the University of Alabama

Graduate assistantships in coastal wetland ecology are available in the Cherry Lab in the Department of Biological Sciences beginning in August 2020. Highly motivated students with experience in field ecology, environmental science or related fields are invited to apply to participate in research projects examining responses of Gulf Coast tidal marshes to sea-level rise and other environmental changes. Visit <http://cherrylab.ua.edu/> for more information on current research projects in Dr. Cherry's Wetland Ecology Lab. Students pursuing a Ph.D. are preferred, although opportunities are available for M.S. students as well.

Interested students should contact Dr. Julia Cherry via email ([julia.cherry@ua.edu](mailto:julia.cherry@ua.edu)), and include copies of their CV, GRE scores, unofficial transcript(s), and a scientific writing sample. Qualified applicants will be invited to apply to the Department of Biological Sciences by the December 15<sup>th</sup> deadline for Fall 2020 admission.

The Department of Biological Sciences offers Graduate Teaching Assistantships (GTAs) that provide tuition waivers, stipends, and health benefits to support selected students. Depending on the project and qualifications of the applicant, Graduate Research Assistantships or Fellowships may be available in lieu of, or in addition to, GTA support.
